

Intune Weekly

Your weekly briefing on what's next in Microsoft Intune

COVERING MAY 26 - JUNE 1, 2026

Curated by Ugur Koc

Service outages hit Autopatch & Proactive Remediation; critical defaults let users wipe corporate devices.

BROUGHT TO YOU BY

ON THE RADAR

Default Intune Settings Allow Users to Wipe Corporate Devices

Any enrolled user can unenroll and wipe their own corporate device via Company Portal by default - admins should hide remove/reset options in Tenant > Customization immediately.

REDDIT

Autopatch Groups & Reporting Inaccessible - Multi-Region Outage

Admins in UK, Europe, and US lost access to Autopatch groups and update reports; validate configurations are intact now that access appears restored.

REDDIT

Proactive Remediation Reporting Delayed Up to 7 Days

A confirmed service degradation means absence of remediation data should not be treated as success - do not make compliance or patching decisions based on reporting until resolved.

REDDIT

mysignins.microsoft.com Down - New User MFA Registration Blocked

New users cannot register Microsoft Authenticator via the self-service portal; workaround is to manually add authentication methods in the Entra admin center.

REDDIT

M365 Apps Policy Blade Leaving Intune Admin Center in June 2026

Admins must migrate policy creation and editing workflows to the Microsoft 365 Apps admin center before the June 2026 service release removes the current blade.

MICROSOFT - MESSAGE CENTER

Landing in your tenant soon

M365 Apps Policy Configuration Moves Out of Intune Admin Center

ADVISORY **ALL** **WIN** **ACTION REQUIRED** MICROSOFT - MESSAGE CENTER - Starting with the June 2026 (2606) Intune service release, the Apps > Policies for Microsoft 365 apps blade will be replaced with a direct link to the Microsoft 365 Apps admin center - admins must migrate any workflow that creates or edits these policies to the Apps admin center before the change lands.

On the horizon

Entra Device Soft Delete Now in Preview - BitLocker Keys and LAPS Preserved for 30 Days

INFO **ALL** **WIN** **PREVIEW** MICROSOFT - LEARN - Accidentally deleted Entra device objects are now moved to a recoverable state for up to 30 days, preserving BitLocker recovery keys, LAPS passwords, and device identity material during that window. No portal UI for restore yet during preview.

Secure Boot Certificate Expiry Hits in June - AMA Scheduled June 4

ADVISORY **ENT** **WIN** BLOG - WINDOWS IT PRO - The first set of Secure Boot certificates begin expiring in June 2026; Microsoft is hosting a Secure Boot Ask Microsoft Anything live stream on June 4 for admins needing guidance. ConfigMgr admins on USB boot media should review the 2023 cert injection process independently of a new ADK release.

Action required

Windows Autopatch Reporting and Groups Inaccessible Across Multiple Regions

CRITICAL **ENT** **WIN** **MS ACK** REDDIT - R/INTUNE - Admins in the UK, Europe, and US are seeing "Something went wrong with our service" and Error 400 when accessing Autopatch groups and update reports; one admin confirmed service restored around 9:00 AM on 02/06/2026, but impact duration suggests a multi-day incident. Check your Service Health dashboard and validate Autopatch group configurations are intact once access is restored.

Proactive Remediation Reporting Delayed Up to 7 Days - Service Degradation Confirmed

CRITICAL **ALL** **WIN** **MS ACK** REDDIT - R/INTUNE - Microsoft issued a service degradation alert confirming up to 24-hour (and in some tenant reports, up to 7-day) delays in Proactive Remediation reporting in the Intune admin center - this is not expected behavior, and a data-center power outage compounded the issue. Admins relying on remediation reporting for compliance or patching decisions should not treat absence of data as success until the incident is resolved.

mysignins.microsoft.com Security Info Page Not Loading - New User MFA Setup Blocked

CRITICAL **ALL** **CROSS** **CONFIRMED** REDDIT - R/INTUNE - Multiple admins across Poland, Netherlands, and other regions report that <https://mysignins.microsoft.com/security-info> fails to load, blocking new users from registering Microsoft Authenticator. Workaround: manually add authentication methods for affected users directly in the Entra admin portal.

What shipped

What's New in Microsoft Intune - May 2026

INFO **ALL** **CROSS** **BLOG - INTUNE** - The May release delivers three Android GA features (Personal Work Profile via Android Management API with browser-based enrollment, direct LOB APK uploads bypassing Managed Google Play, and MTD enhanced permissions on Android Enterprise), macOS Platform SSO improvements for ADE, direct CA renewal flows, and faster compliance evaluation. Full details across all platforms in the blog post.

Intune RBAC Roles Now Automatically Inherit Copilot in Intune Access

INFO **ALL** **CROSS** **MICROSOFT - LEARN** - When Intune is enabled as a Security Copilot data source, the Intune Administrator role automatically gets Security Copilot owner access and all other Intune RBAC roles get contributor access - no separate role assignment needed. This removes a significant onboarding friction point for organizations adopting Copilot in Intune.

Remote Help for Windows 5.2.1037.0 Released with Performance Improvements

INFO **ALL** **WIN** **SUITE** **MICROSOFT - LEARN** - The latest Remote Help for Windows release includes general bug fixes and reliability improvements; no functional changes are noted.

Windows Autopatch Hotpatch Now Default for Intune-Managed Devices; GCC Support Added

INFO **ENT** **WIN** **MICROSOFT - RELEASE HEALTH** - Hotpatch updates are now enabled by default for organizations using Windows Autopatch through Intune or the Windows Updates API, and Windows Autopatch is now accessible to eligible Microsoft 365 GCC customers. Windows Server 2025 hotpatch via Azure Arc also expanded at no additional cost.

May 2026 Windows 11 Non-Security Preview Update Now Available

INFO **ALL** **WIN** **MICROSOFT - RELEASE HEALTH** - The May 2026 non-security preview update is available for Windows 11 versions 26H1, 25H2, and 24H2; admins can validate before the mandatory June quality update.

ConfigMgr 2603 Update Now Available

INFO **ENT** **WIN** **REDDIT - R/SCCM** - **CONFIRMED** The CM 2603 update is available in the console; notably, no new ADK ships with this release, leaving admins using USB boot media to manually address the expiring 2011 Secure Boot boot certificate via the 2023 cert injection process.

From the field

macOS WiFi Configuration Policies Returning InternalServerError via Graph - Inaccessible in Portal

CRITICAL **ENT** **MAC** **1 REPORT** **BLOG - DISCUSSIONS** - A null value stored for the non-nullable `wifiRequirePhysicalMacAddressEnabled` property in macOS WiFi Configuration policies is causing Graph API calls to return truncated, malformed responses and the Intune portal to display no data for affected policies. No workaround confirmed; admins should raise a support ticket if hitting this.

Company Portal (UWP) Showing Widespread Failure Rates Across Multiple Tenants

ADVISORY **ALL** **WIN** **CONFIRMED** **REDDIT - R/INTUNE** - Admins managing multiple tenants are reporting simultaneous Company Portal installation failures starting roughly two weeks ago, consistent with a backend Microsoft Store or Intune issue rather than tenant-specific misconfiguration. The pattern across independent tenants suggests a platform-level problem; monitor Service Health and consider switching to Win32 delivery of Company Portal as a workaround.

Community Tool: Get-IntuneAssignments v1.0.15 Adds 7 New Policy Types

INFO **ALL** **CROSS** **REDDIT - R/INTUNE** - **CONFIRMED** The Get-IntuneAssignments PowerShell tool now covers Terms and Conditions, Compliance Policies (Settings Catalog), Cloud PC Provisioning Policies, WDAC Supplemental Policies, macOS Shell Scripts, Custom Attribute Scripts, and Intune Branding Profiles, plus important bug fixes. Available on the PowerShell Gallery now.

Community Tool: IME Changelog Automation - What Changed Inside the Intune Management Extension

INFO **ALL** **WIN** **1 REPORT** **REDDIT - R/INTUNE** - An admin-built automation pulls apart each new IME release and diffs DLLs, payload files, and internal methods against the previous version, surfacing changes Microsoft never publishes in release notes. Essential reading for anyone debugging Win32 apps, remediations, or Autopilot v2 behaviour tied to IME updates.

Community Tool: Foundry OSD Now Supports Zero-Touch Autopilot Hardware Hash Upload

INFO **ALL** **WIN** **CONFIRMED** **REDDIT - R/INTUNE** - The open-source Foundry OSD project now offers both Autopilot JSON profile injection and automated hardware hash upload during OS deployment, targeting a genuine zero-touch workflow that reduces provisioning from hours to minutes.

Default Intune Settings Allow End Users to Self-Unenroll and Wipe Their Own Corporate Devices

ADVISORY **ALL** **WIN** **CONFIRMED** **REDDIT - R/INTUNE** - By default, users can unenroll (and trigger a wipe of) any Intune-enrolled device registered to them via the Company Portal, including corporate-owned hardware - a serious risk for remote workers. Mitigation: in Tenant Administration > End User Experiences > Customization, enable "Hide remove" and "Hide reset" options for Windows and iOS/iPadOS devices.

Edge "Sign in to sync your data" Splash Screen Persists Despite Intune Configuration Profile

ADVISORY **ALL** **WIN** **1 REPORT** **BLOG - DISCUSSIONS** - Admins report that the Edge first-run sync prompt appears even with Intune configuration profiles intended to suppress it; the exact CSP/ADMX setting combination needed to reliably block this on first login is unconfirmed.

[Read more](#)

Microsoft Store App (New) Deployment Fails Reporting When Store Is Blocked by Policy

ADVISORY **ALL** **WIN** **1 REPORT** **REDDIT - R/INTUNE** - An admin reports that deploying "Microsoft Store app (new)" type apps via Intune results in Company Portal showing installation failure when end-user Store access is blocked, even though the app installs successfully. Community consensus suggests the issue is caused by legacy Store-blocking settings that also suppress background Store network traffic required by the new app type - review which CSP or ADMX setting is used to block the Store.

macOS Platform SSO During ADE Failing 30–50% of the Time

ADVISORY **ENT** **MAC** **CONFIRMED** REDDIT - R/INTUNE - Multiple admins report Platform SSO enrollment during Automated Device Enrollment is failing roughly one-third to one-half of attempts with identical configurations, pointing to a reliability issue in the platform rather than misconfiguration. No official acknowledgement or workaround confirmed yet.

Secure Boot Enablement May Break Windows Hello When BitLocker Is Active

ADVISORY **ENT** **WIN** **1 REPORT** REDDIT - R/INTUNE - Admins enabling Secure Boot on devices where it was previously disabled are reporting potential Windows Hello breakage; the confirmed safe sequence is: suspend BitLocker, enable Secure Boot (via Lenovo WMI or equivalent), reboot, then verify certificate visibility in Intune reporting. Devices with Secure Boot disabled will not receive automatic certificate updates.

[Read more](#)

On-Demand Script Execution in Intune: Remediation Scripts as the SCCM "Scripts" Replacement

INFO **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins migrating from SCCM Scripts to Intune can use unassigned Remediation scripts triggered per-device from the device's Remediation tab - a supported but lightly documented "run on demand" preview capability. Community notes response is not instant but is faster than a full policy sync cycle.

[Read more](#)

Autopilot v2 Supports Manufacturer + Model + Serial Registration Without Hardware Hash

INFO **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Autopilot v2 (and CIPP for MSPs with GDAP) allows device registration using only manufacturer, model, and serial number - no hardware hash capture required. Admins who still need the hash for legacy scenarios can retrieve it via a device remediation script post-enrollment.

WinGet Auto-Update vs. Enterprise App Management vs. Patch My PC - Community Verdict

INFO **SMB** **WIN** **CONFIRMED** REDDIT - R/INTUNE - A high-engagement thread confirms that Intune's built-in Enterprise App Management lacks automatic update logic and requires manual package recreation per release, making it a poor Patch My PC substitute. Community consensus favours PMPC (with a private WinGet preview now opening) or Romanitho's WinGet-AutoUpdate for automated third-party patching.
