

Intune Weekly

Your weekly briefing on what's next in Microsoft Intune

COVERING JUNE 23 - 29, 2026

Curated by Ugur Koc

MAA breaks automation, BitLocker hits HP devices, and Intune Suite lands in E3/E5 tenants.

BROUGHT TO YOU BY

ON THE RADAR

Multi Admin Approval Breaking Graph API Automation

Any service principal or runbook making Intune or Entra Graph write calls will fail with an approval error this week unless you explicitly exclude the app registration - audit and fix before production breaks.

BLOG - INTUNE

BitLocker Recovery Loops on HP EliteDesk After KB5094126

The June Secure Boot certificate update is forcing BitLocker recovery prompts on HP EliteDesk 800 G6 devices - hold broad patch deployment and prioritise BIOS 2.26 updates on affected models now.

REDDIT

Intune Suite Live in E3/E5 Tenants - Remote Help July 1

Intune Suite capabilities including Remote Help are already activating in some tenants ahead of the July 1 cutover, so admins should configure and communicate the change to help desk teams this week.

REDDIT

Legacy Apple MDM Update Policies Retiring - Migrate to DDM

Legacy MDM software update workloads will be removed from the Intune UI when macOS/iOS 27 ships, and the beta cycle is open now - waiting until GA will leave you without update control.

BLOG - CUSTOMER SUCCESS

New Wipe UI Causing Accidental Single Wipes

The redesigned device page's radio-button wipe flow has already caused multiple admins to issue Single Wipe (enrollment preserved) when intending a full wipe - brief your team before anyone runs a wipe command this week.

REDDIT

COMMUNITY SPOTLIGHT

Mert Ozsoy @mertozsoy
IntuneWin32AppUninstall

A PowerShell GUI tool that scans the Windows Registry for MSI-installed applications and automatically generates Microsoft Intune-compatible Detection and Remediation scripts, so admins can build clean Win32 app uninstall logic without hand-writing the detection rules.

Landing in your tenant soon

Intune Suite Add-ons Rolling Into M365 E3/E5 Tenants – Remote Help Arrives July 1

INFO ENT WIN SUITE MICROSOFT - LEARN - Intune Suite capabilities including Remote Help are being enabled for M365 E3 and E5 tenants starting July 1, with several admins reporting early activation already live in their tenants. A community step-by-step guide is available to help configure Remote Help ahead of the cutover; note that Unattended Access is expected in August.

macOS and iOS/iPadOS Minimum Version Bump Tied to Fall OS 27 Release

ADVISORY ALL MAC IOS MICROSOFT - MESSAGE CENTER - After Apple releases macOS 27 and iOS/iPadOS 27 later this year, Intune will drop support for macOS 14.x and below and require iOS/iPadOS 18 and higher - currently enrolled devices keep receiving policy but new enrollment and MAM will require the new minimums. Audit your device fleet now against Apple's compatibility lists and begin communicating upgrade expectations to users.

Windows Security Baseline 25H2 Updated: New IE11 COM Automation Block Setting

ADVISORY ENT WIN MICROSOFT - LEARN - The existing Windows security baseline version 25H2 has been updated in-place to add "Disable Internet Explorer 11 Launch Via COM Automation" (default: Enabled), closing an attack surface that was excluded at initial release due to a now-resolved known issue. Admins must edit and re-save existing baseline profiles for the new setting to appear and apply.

On the horizon

EPM Expanding to System-Level Network Configuration and Time Sync

INFO ENT WIN SUITE MICROSOFT - IN DEVELOPMENT - Endpoint Privilege Management is gaining the ability to let standard users change IP, gateway, DNS, and time zone settings without local admin rights, surfaced in the latest EPM agent bits. Community analysis has documented the client-side implementation ahead of official announcement.

Controlled Configuration for Defender Antivirus: Intune Becomes Single Source of Truth

ADVISORY ENT WIN MICROSOFT - IN DEVELOPMENT - A new "Controlled Configuration" public preview will make Intune and Defender for Endpoint the authoritative override for all antivirus settings, superseding GPO, Configuration Manager, local scripts, and other channels. Review existing multi-channel antivirus management before enabling, as CC will silently win over every other config path.

[Read more](#)

Device Control Policy Support Extended to Defender for Endpoint Security Settings Management

ADVISORY **ENT** **WIN** MICROSOFT - IN DEVELOPMENT - Intune's Attack Surface Reduction Device Control policy will begin applying to Windows devices managed by MDE security settings management even when not enrolled in Intune. Admins should audit existing Device Control assignments to avoid unintended enforcement on MDE-managed-only devices.

[Read more](#)

Custom Compliance Settings Coming to macOS

INFO **ALL** **MAC** MICROSOFT - IN DEVELOPMENT - Intune will support script- and JSON-based custom compliance checks for macOS, bringing it in line with existing Windows and Linux capabilities. Results will surface alongside standard compliance reporting in the admin center.

[Read more](#)

Client-Driven Compliance Evaluation for Windows to Reduce Reporting Lag

INFO **ALL** **WIN** MICROSOFT - IN DEVELOPMENT - Windows devices will soon detect compliance-relevant state changes locally and proactively trigger re-evaluation instead of waiting for the next scheduled check-in, delivering faster reporting and access decisions. Rolling out to Windows in preview.

[Read more](#)

Agentic Identity for the Policy Configuration Agent

INFO **ENT** **CROSS** MICROSOFT - IN DEVELOPMENT - The Intune Policy Configuration Agent will shift from human user identity to a Microsoft Entra agentic identity, enabling autonomous and auditable policy actions. Existing agents will need to manually trigger identity creation from the agent's Settings tab; new agents will have it auto-provisioned.

[Read more](#)

Scope Tags Support for EPM Reports

INFO **ENT** **WIN** **SUITE** MICROSOFT - IN DEVELOPMENT - A fix is coming that will make Endpoint Privilege Management reports respect the report viewer's assigned scope, so delegated admins see only users and devices within their scope. No action needed now, but scoped admin workflows should be validated after rollout.

Intune Planning for Apple OS 27 - Legacy MDM Update Policies Being Retired

ADVISORY **ALL** **MAC** **IOS** BLOG - CUSTOMER SUCCESS - With macOS 27 and iOS/iPadOS 27, legacy MDM software update workloads are being removed from the Intune UI in favour of Declarative Device Management (DDM) exclusively. Admins should migrate to DDM-based update policies during the beta cycle this summer to avoid losing update control at GA release.

Windows Server 2022 Hotpatch Support Extended to October 2027

INFO **ENT** **WIN** MICROSOFT - RELEASE HEALTH - Microsoft has extended hotpatch update support for Windows Server 2022 Datacenter: Azure Edition by one year to October 2027; no action is required for tenants already receiving hotpatches, and the monthly cadence is unchanged.

Point-in-Time Restore for Windows 11 Now Generally Available

INFO **ENT** **WIN** BLOG - WINDOWS IT PRO - Windows 11 now includes a built-in point-in-time restore capability enabling minute-level recovery from unexpected issues without full rebuilds. IT teams should evaluate how this interacts with existing Autopilot and Intune provisioning workflows.

Action required

Multi Admin Approval Now Enforcing on Graph API Write Calls - Automation Will Break

CRITICAL **ALL** **CROSS** *MS ACK* MICROSOFT - LEARN - Intune is re-enforcing Multi Admin Approval (MAA) on Graph API write operations after a March rollback; any automation using Enterprise Application registrations for Intune or Entra write actions will now receive an `x-msft-approval-justification` error unless the app registration is explicitly excluded. Audit all automation, runbooks, and service principals making Intune Graph write calls and apply exclusions before workflows break in production.

Intune Data Warehouse Beta Connector Deprecation in Power BI

ADVISORY **ENT** **CROSS** MICROSOFT - IN DEVELOPMENT - The Intune Data Warehouse (beta) connector for Power BI is being deprecated; admins relying on it for compliance or inventory dashboards must migrate to the supported connector before the connector stops functioning. Begin identifying affected reports and plan migration now.

Secure Boot Certificate Update (KB5094126) Triggering BitLocker Recovery on Some HP Devices

CRITICAL **ENT** **WIN** **CONFIRMED** MICROSOFT - LEARN - The June 2026 Secure Boot UEFI 2023 certificate update is causing BitLocker recovery key prompts on reboot for certain HP EliteDesk 800 G6 devices where certificates are not fully syncing to firmware; the `UEFI2023Status` registry key remains unset on affected machines. Workarounds include enabling the certs manually via BIOS F10 setup or PowerShell, and HP BIOS version 2.26 resolves the issue seen with 2.25 - check HP's advisory and prioritise BIOS updates for affected models before broader patch deployment.

What shipped

Enterprise App Management Auto-Update and GCC High/DoD Support Now GA

INFO **ENT** **WIN** MICROSOFT - LEARN - EAM now automatically detects and applies newer catalog versions to devices with required assignments, eliminating manual supersedence workflows, and the EAM enterprise catalog is now available in GCC High and DoD environments for government tenants. Both capabilities are generally available as of the June What's New release.

[Read more](#)

macOS PKG Available Apps Now Auto-Update Without User Interaction

INFO **ALL** **MAC** MICROSOFT - LEARN - When a macOS PKG app policy is updated with a new version sharing the same bundle ID and the user has already installed the app, Intune now pushes the update automatically without requiring the user to tap Install or Reinstall in Company Portal. Requires macOS Intune management agent version 2606.013 or later.

[Read more](#)

Remote Help Now Supports RemoteApp Sessions in Azure Virtual Desktop

INFO **ENT** **WIN** **SUITE** MICROSOFT - LEARN - Help desk agents can now securely view and control apps running within Azure Virtual Desktop RemoteApp sessions via Remote Help, extending AVD support beyond full desktop sessions.

[Read more](#)

Updated Security Baseline for Microsoft 365 Apps for Enterprise (v2512)

ADVISORY **ENT** **WIN** MICROSOFT - LEARN - A new M365 Apps security baseline version v2512 is available, skipping the previously published v2412 from the Security Compliance Toolkit; note that three VBA macro sub-settings are temporarily absent and will be added in a future update. Review carefully before adopting as this is a meaningful policy delta from the prior version.

New Android Enterprise Settings Catalog Entries: AI Agent Function Blocking, Bluetooth Sharing Block, and More

INFO **ALL** **AND** MICROSOFT - LEARN - The June release adds several new Android Enterprise settings catalog entries, including the ability to block apps from exposing functions to on-device AI agents and assistants, and a new Block Bluetooth Sharing control. Review the full What's New list for the complete settings inventory.

[Read more](#)

WPA3-Personal Now Supported in iOS/iPadOS Wi-Fi Profiles

INFO **ALL** **IOS** MICROSOFT - LEARN - Admins can now select WPA3-Personal as the security type when configuring Wi-Fi profiles for iOS/iPadOS devices, aligning managed Apple devices with current Wi-Fi Alliance standards. WPA3 support for Windows, Android, macOS, and WPA3-Enterprise is planned for a future release with no ETA.

[Read more](#)

Microsoft Tunnel Adds RHEL 9.7 Support

INFO **ENT** **AND** **IOS** MICROSOFT - LEARN - Microsoft Tunnel Gateway now supports Red Hat Enterprise Linux 9.7 with Podman 5.8.2 as the required container engine; admins upgrading from Podman v3 must recreate containers and reinstall Tunnel as old containers are incompatible. RHEL 9.7 also requires manually loading the ip_tables kernel module before Tunnel installation.

[Read more](#)

New Defender Antivirus Settings for Linux Server: Offline Intelligence Updates and Scheduled Scans

INFO **ENT** **CROSS** MICROSOFT - LEARN - Two new settings - offline security intelligence updates and scheduled scan management - are now available in the existing Intune Antivirus policy for the Microsoft Defender Antivirus profile on Linux Server, defaulting to Not configured. No new profile is required.

[Read more](#)

Trustd Mobile Now Supported as an Intune MTD Partner

INFO **ALL** **AND** **IOS** MICROSOFT - LEARN - Trustd Mobile is now available as a mobile threat defense integration partner for enrolled Android 9.0+ and iOS/iPadOS 15.0+ devices.

[Read more](#)

Self-Service Onboarding for MDM Compliance Partners Now Available

INFO **ENT** **CROSS** MICROSOFT - LEARN - Third-party MDM compliance partners can now build and onboard their own compliance connectors using Microsoft-provided documentation and validation hooks, with admins opting in via the admin center rather than waiting for Microsoft engineering coordination. This self-service model expands the partner ecosystem and reduces integration timelines.

ChatGPT Added as an Intune Protected App

INFO **ALL** **IOS** **AND** MICROSOFT - LEARN - ChatGPT is now available as a Microsoft Intune MAM-protected app, enabling app protection policy enforcement for ChatGPT on mobile devices.

[Read more](#)

macOS Privacy Preferences Policy Control (PPPC) Now Configurable via Settings Catalog

INFO **ALL** **MAC** BLOG - CUSTOMER SUCCESS - Microsoft has published guidance confirming PPPC settings - covering Full Disk Access, Camera, Microphone, Screen Recording, and more - can now be configured through the Intune Settings Catalog, removing the need for custom payloads. Admins should review existing PPPC profiles and migrate to the catalog-based approach.

From the field

New Intune Device Page UI Makes Wipe Workflow Confusing - Admins Accidentally Running Single Wipe

ADVISORY **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - The redesigned device page presents Wipe options as radio buttons (Single Wipe / Continuous Wipe) with the confirmation checkbox visually grouped below them, leading multiple admins to accidentally select Single Wipe (keeps enrollment state) when intending a full wipe. The old UI allowed a plain Wipe with no mandatory radio selection - admins should brief their teams on the new flow before issuing wipe commands.

Platform Scripts Showing 0 Targeted Devices Despite Healthy IME and Entra Join

ADVISORY **SMB** **WIN** **1 REPORT** BLOG - DISCUSSIONS - An admin reports that all Platform Scripts remain at 0 Devices / 0 Succeeded / 0 Errors regardless of assignment or script content in an M365 Business Premium environment with healthy IME. No confirmed fix has been identified; community troubleshooting is ongoing.

Intune Suite First Impressions: Cloud PKI and EPM Praised, Enterprise App Catalog and Remote Help Draw Criticism

INFO **ENT** **WIN** **SUITE** **CONFIRMED** REDDIT - R/INTUNE - Community members newly accessing Intune Suite via E3/E5 inclusions report Cloud PKI and EPM as standout wins, particularly for retiring NDES, while the Enterprise App Catalog receives criticism for inadequate running-process handling during installs and Remote Help is seen as sluggish compared to BeyondTrust/Bomgar. Unattended Access for Remote Help is flagged as the missing capability before meaningful TeamViewer displacement.

Enterprise App Catalog in Production: No Running Process Handling, Pricing vs. Patch My PC Debate

ADVISORY **ENT** **WIN** **SUITE** **CONFIRMED** REDDIT - R/INTUNE - Admins testing EAM in production report that the catalog provides no mechanism to handle running processes during updates, causing failures for apps in active use; the community is also actively debating whether EAM at \$2/device/month justifies replacement of Patch My PC at ~\$3.50/device/year. No Microsoft-confirmed fix for the process handling gap has been announced.

WHfB Cloud Kerberos Trust Provisioning Failures on Hybrid-Joined Windows 11 24H2

ADVISORY **ENT** **WIN** **1 REPORT** REDDIT - R/SYSADMIN - An admin reports PIN provisioning failures with Windows Hello for Business using Cloud Kerberos Trust on Hybrid Entra-joined Windows 11 24H2 (build 26100.8655), with issues traced to Entra Connect Sync being paused during user PIN setup. A Microsoft support ticket is open but unresolved; workaround involves re-enabling sync and having users re-provision via password login and elevated PowerShell.

M365 WebView2 Traffic Bypassing Delivery Optimization - Now in Microsoft Product Group Backlog

INFO **ENT** **WIN** **MS ACK** REDDIT - R/SYSADMIN - After a 10-month community campaign, Microsoft has acknowledged that M365 app updates routed through WebView2 bypass Delivery Optimization throttling controls, and the issue is now in the product group backlog. No fix timeline has been given, but bandwidth-conscious environments should monitor the thread for updates.

Autopilot Devices Reverting to Previous Company's Branding After Reset

ADVISORY **SMB** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins report that hardware-hash registration with a prior tenant persists through Intune and Autopilot resets, causing devices to display the old company's enrollment portal after wipe even when showing correctly in the new tenant's Autopilot list. Resolution requires opening a Microsoft support ticket to remove the device record from the former tenant.

Winget System Context Installs Failing Without Explicit Source Configuration

INFO **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Multiple admins report that winget-wrapped PowerShell deployments work in user context but fail silently in system context because system context lacks access to the user-scoped winget source by default. Community-recommended solutions include the Romanitho Winget-Install and WingetIntunePackager GitHub projects, and explicitly referencing the winget source in the install command.

Token Theft in Higher Education: Conditional Access Options When Devices Cannot Be Managed

INFO **SMB** **CROSS** **CONFIRMED** REDDIT - R/SYSADMIN - Higher education admins report persistent token theft campaigns against students using personal, unmanaged devices where device-based CA policies cannot be enforced; the community consensus is that phishing-resistant MFA (FIDO2/passkeys) is the only reliable control but is difficult to mandate for personal devices. Continuous Access Evaluation and session token binding are partial mitigations but do not eliminate risk.
