Your weekly briefing on what's next in Microsoft Intune

COVERING MAY 19 - 25, 2026

Curated by Ugur Koc

BitLocker loops return, passkeys bypassed by AiTM, and scripts reporting still broken.

BROUGHT TO YOU BY

ON THE RADAR

BitLocker Recovery Loop After May KB5089549

Windows 11 devices are looping on the BitLocker recovery screen after every reboot post-patch - HP has a firmware workaround but admins need to act before wider deployment.

REDDIT

Passkeys Not Blocking AiTM Session Token Theft

Confirmed compromises show phishing-resistant MFA alone doesn't stop session hijacking - admins should add token protection and Continuous Access Evaluation policies now.

REDDIT

Remediation Script Reporting Still Stale Post-Outage

Console results are still showing May 16–17 timestamps days after recovery, so any compliance or operational decisions based on console data are unreliable until Microsoft closes the investigation.

REDDIT

Low Telemetry Hides Devices from Secure Boot Report

Devices on 'Security' telemetry level are completely invisible to the Secure Boot certificate report, meaning admins may be miscounting compliance exposure ahead of the certificate rollout deadline.

REDDIT

Remote Help & Advanced Analytics Rolling Into M365 Suites

Starting mid-June, these premium add-on features begin landing automatically in M365/EMS SKUs - admins should review licensing now to avoid surprise capacity or configuration gaps.

MICROSOFT - MESSAGE CENTER

UPCOMING CHANGES

Jun 2026	RM399933	Intune Suite - Improved elevation detection	IN DEVELOPMENT	ROADMAP
Jun 01	MC1255405	Microsoft Edge for Business: Cross-tenant support using Intune Mobile Application Management (MAM)	BREAKING CHANGE	MESSAGE CENTER
Jun 06	MC1248388	Plan for Change: Windows Autopatch is enabling hotpatch updates by default		MESSAGE CENTER
Jul 2026	RM499154	Intune Suite - Unattended Remote Help for Windows - Remote Sign-in	IN DEVELOPMENT	ROADMAP
Jul 2026	RM536578	[Entra] Microsoft Entra: Microsoft Security Copilot App Lifecycle Management Agent in Microsoft Entra	IN DEVELOPMENT	ROADMAP
Aug 17	MC1274325	Upcoming change: Microsoft 365 Apps SAEC and MEC will unify	BREAKING CHANGE	MESSAGE CENTER

Landing in your tenant soon

Remote Help and Intune Advanced Analytics Coming to M365 / EMS Suites in Mid-June

ADVISORY **ALL** **CROSS** **SUITE** **MICROSOFT - MESSAGE CENTER** - Starting mid-June and completing by August 1, 2026, Remote Help and Intune Advanced (plus other Defender and Purview features) will roll out as part of the 2026 Microsoft 365 Packaging and Pricing Update to M365, Office 365, and EMS suites. Admins should review the licensing blog now to confirm which features land in their specific SKU and plan capacity and configuration accordingly.

On the horizon

Admin Insights for Windows 365 Now in Public Preview

INFO **ENT** **WIN** **PREVIEW** **BLOG - WINDOWS IT PRO** - Microsoft has launched Admin Insights for Windows 365 in public preview, giving IT admins a prioritised, at-a-glance view of critical actions and environment health for their Cloud PC fleet. Admins running Windows 365 should opt in and review the technical documentation to get ahead of the GA feature set.

Action required

Remediation and Platform Scripts Reporting Broken - Multi-Tenant Outage Now Resolved

CRITICAL **ALL** **WIN** **CONFIRMED** **REDDIT - R/INTUNE** - Multiple admins reported Platform Scripts and Remediation Scripts returning 404 errors and showing zero device results in the console beginning around May 20; scripts were confirmed back online May 21 but reporting delays of several days are still being observed. If your remediation console still shows stale data, open a support ticket and manually verify script execution via on-device logs.

What shipped

Updated Secure Boot Status Report Now Live in Windows Autopatch

ADVISORY **ENT** **WIN** **ROLLING OUT** **BLOG - WINDOWS IT PRO** - The Secure Boot status report in Windows Autopatch has been refreshed with device-level certificate status, trust configuration details, confidence levels, and alerting to support the ongoing Secure Boot certificate rollout. Admins should note that hotpatch updates can slow deployment of Secure Boot certificate updates and plan their rollout strategy accordingly - direct link to the report: intune.microsoft.com/#view/Microsoft_EMM_ModernWorkplace/SecureBootReport.ReactView.

Batch of In-Development Features Removed - Likely Shipped or Cancelled

INFO **ALL** **CROSS** **MICROSOFT - IN DEVELOPMENT** - Ten items were simultaneously dropped from the In Development list on May 26, including Direct Android LOB app management, Access management for Apple services, Enhanced app inventory, userless ADE for visionOS/tvOS, Expanded EPM support, Credential Manager permissions for Android Enterprise, the updated Device page (public preview), Change Review Agent suggestions in Multi Admin Approval (public preview), updated Intune Management Extension minimum version, and the Android Enterprise Block Location fix. Items removed from In Development typically indicate GA shipment, quiet cancellation, or a stage change - admins should check the What's New docs to confirm which have landed.

From the field

BitLocker Recovery Loop Returns After May KB5089549 - Worse Than April's KB5083769

CRITICAL **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins report Windows 11 devices are hitting the BitLocker recovery screen on every reboot after installing May's KB5089549, despite Microsoft claiming the April regression was fixed; HP has published a firmware advisory and several admins confirm enabling the Secure Boot 2023 BIOS option resolves the loop. If you are seeing persistent recovery prompts, check HP's support document and verify Secure Boot certificate settings in BIOS before waiting for a further patch.

Telemetry Level Affects Secure Boot Certificate Report Visibility

ADVISORY **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins discovered that devices set to "Security" (off) telemetry level are invisible to the Secure Boot certificate status report, and switching to "Full" caused hundreds of devices to shift from unknown to "Up to date" or "Under Observation - More Data Needed." If your Secure Boot report shows unexpectedly low device counts, review your Allow Telemetry configuration profile setting before assuming compliance.

Passkeys Not Stopping Session Token Theft via AiTM Attacks

CRITICAL **ENT** **CROSS** **CONFIRMED** REDDIT - R/SYSADMIN - Admins report confirmed account compromises even with Conditional Access policies enforcing passkey authentication, with Azure logs showing the same AiTM session-token theft pattern previously seen with MFA. Passkeys solve credential phishing but not session hijacking - admins should layer token protection, Continuous Access Evaluation, and device compliance requirements alongside phishing-resistant MFA.

Remediation Script Console Reporting Still Delayed Days After Outage Recovery

ADVISORY **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Even after Platform Scripts came back online May 21, multiple admins report that Remediation Script results in the console are showing last-run times from May 16-17 and new scripts are not reporting. Microsoft has an open investigation; cross-reference on-device log files rather than relying on console reporting until this fully clears.

Microsoft Store App Deployment Fails Reporting When Store Access Is Blocked by Policy

ADVISORY **ALL** **WIN** **1 REPORT** REDDIT - R/INTUNE - An admin reports that "Microsoft Store app (new)" deployments via Intune correctly install apps but Company Portal marks them as failed when the Microsoft Store is blocked by an Intune policy, with a support case open and Microsoft investigating. Community responses suggest the issue may stem from using a legacy Store-blocking setting that also blocks download infrastructure - check which specific setting is used to disable Store access before escalating.

SCCM-to-Intune Migration Framework Automates Autopilot Import - 6.5 Hours to 30 Minutes

INFO **ENT** **WIN** **1 REPORT** REDDIT - R/INTUNE - An admin published a community framework that replaces manual hardware hash CSV exports and Intune portal uploads for orphaned SCCM devices, reducing per-device migration from 6.5 hours to roughly 30 minutes with a single technician dropdown selection at OOB. Admins considering large-scale SCCM-to-Intune migrations should review the permission model carefully - the service principal requires DeviceManagementServiceConfig.ReadWrite.All.

Driver Automation Tool v10 Seeking Community Feedback

INFO **ENT** **WIN** **1 REPORT** REDDIT - R/INTUNE - The maintainer of the Driver Automation Tool has released a new version and is actively soliciting bug reports and feature requests; known issues include stale Dell driver data in the catalog and ConfigMgr package source files not being deleted when packages are removed via the GUI. Admins using DAT for driver management should test the updated Dell deduplication catalog and report findings in the thread.

94 Personal Devices Enrolled Despite BYOD Policy - Enforcement Gap Pattern

ADVISORY **ALL** **CROSS** **1 REPORT** REDDIT - R/INTUNE - An admin discovered 94 personal devices enrolled across 300 employees after a Conditional Access enforcement policy was written but never activated, exposing a common gap between policy documentation and technical enforcement. Immediate recommended steps include enabling device enrollment restrictions to block new personal enrollments and scoping a remediation plan for existing enrolled personal devices before enabling CA enforcement.

Windows Hello for Business Cloud Kerberos Trust Fails on Hybrid-Joined Devices

ADVISORY **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Multiple admins report significant difficulty getting Windows Hello for Business Cloud Kerberos Trust working after hybrid-joining devices with Intune/Autopilot, with community noting that privileged accounts (domain admins) will not work by design for testing and that several specific GPO settings must be co-configured. Review the Cloud Trust deployment guide and test only with standard user accounts to avoid false negatives during validation.

Dark Mode QR Code Bug: Enrollment Token QR Codes Won't Scan in Dark Mode

ADVISORY **ALL** **CROSS** **1 REPORT** REDDIT - R/INTUNE - An admin reports that enrollment token QR codes generated in the Intune Admin Center become unscannable when dark mode is enabled, apparently due to colour inversion - switching to light mode restores scanning. Admins relying on QR-based enrollment workflows should switch to light mode when generating tokens until Microsoft addresses the rendering issue.

LAPS for macOS Intermittently Failing - Username Case Sensitivity Is a Factor

ADVISORY **SMB** **MAC** **CONFIRMED** REDDIT - R/INTUNE - Admins report Intune LAPS for macOS not returning passwords reliably, with one confirmed workaround being to ensure the managed admin username is entirely lowercase with no special characters. Enrollment method also appears to be a factor - ABM enrollment with Platform SSO is reported as stable.

Dell BIOS/Firmware Management via Intune: DCU + Autopatch Approaches Compared

INFO **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Two active threads this week show admins converging on Dell Command Update (DCU) configured via imported ADMX/GPO templates in Intune, with Windows Autopatch driver updates as an alternative; monthly BIOS cadence is considered aggressive by most but is defensible for security-critical fleets. Admins managing mixed Dell fleets should review DCU ADMX template import and Autopatch driver policy options before committing to a cadence.
