

Intune Weekly

Your weekly briefing on what's next in Microsoft Intune

COVERING JUNE 2 - 8, 2026

Curated by Ugur Koc

WuFb driver bypass, ASR silent disables, and Scripts reliability meltdown dominate a turbulent week.

BROUGHT TO YOU BY

ON THE RADAR

WuFb Driver Policies Bypassed: 32 Drivers Force-Installed

A Microsoft-acknowledged service incident (MO1332784) caused declined driver policies to be ignored across multiple tenants, so admins should audit driver inventory and declined states immediately.

[REDDIT](#)

ASR Rules Silently Disabled by Baseline + Policy Conflict

Conflicting ASR assignments between a Security Baseline and an Endpoint Security profile silently disable rules with no conflict alert, leaving endpoints potentially unprotected without any visible warning.

[REDDIT](#)

Scripts & Remediations: Silent Failures and 8-Day Execution Gaps

A 900-upvote community thread documents widespread silent failures, missing logs, and multi-day execution delays in Scripts and Remediations, making any automation relying on these features unreliable right now.

[REDDIT](#)

Secure Boot CA 2023: Manual Task Trigger Required for Update

BIOS updates alone do not trigger the Secure Boot CA 2023 certificate update, and the scheduled task must be manually invoked, so admins relying on passive rollout may miss the update entirely before compliance deadlines.

MDOP End of Support: Migrate MBAM and App-V to Intune

MDOP passed end of extended support on April 14, 2026, meaning any remaining MBAM or App-V workloads are now unpatched security risks and migration to Intune equivalents should be treated as urgent.

COMMUNITY SPOTLIGHT

Simon Hartmann Eriksen & Roy Klooster

PPPC Builder for macOS

A lightweight web-based tool that generates macOS PPPC (.mobileconfig) profiles tailored for Microsoft Intune. Select an app (or upload its Info.plist), choose the required privacy permissions (Screen Recording, Full Disk Access, Camera, Microphone, Accessibility), and download a ready-to-deploy .mobileconfig for Intune. No Jamf dependency; simple, fast, Intune-focused.

UPCOMING CHANGES

Jul 2026	RM499154	Intune Suite - Unattended Remote Help for Windows - Remote Sign-in	IN DEVELOPMENT	ROADMAP
Jul 2026	RM536578	[Entra] Microsoft Entra: Microsoft Security Copilot App Lifecycle Management Agent in Microsoft Entra	IN DEVELOPMENT	ROADMAP

Jul 31	MC1330892	Plan for Change: Configure Microsoft 365 Apps policy settings in the Microsoft 365 Apps admin center	MESSAGE CENTER
Aug 17	MC1274325	Upcoming change: Microsoft 365 Apps SAEC and MEC will unify BREAKING CHANGE	MESSAGE CENTER
Aug 24	MC1188216	Plan for Change: Update to Intune Data Warehouse infrastructure	MESSAGE CENTER
Aug 30	MC1381122	Microsoft Defender XDR: Retirement of in-app OS update notifications in Defender for Endpoint (iOS) BREAKING CHANGE	MESSAGE CENTER

Landing in your tenant soon

MDE iOS In-App OS Update Notifications Retiring Mid-July 2026

ADVISORY **ALL** **IOS** MICROSOFT - MESSAGE CENTER - Microsoft Defender for Endpoint on iOS will stop delivering in-app OS update notifications and recommendations starting mid-July 2026, with rollout completing by late July. OS update compliance enforcement moves entirely to Intune MDM/MAM; admins should confirm their Intune compliance policies are configured to cover the gap before the feature disappears.

On the horizon

MDOP End of Support: Migration Path to Intune

ADVISORY **ALL** **WIN** BLOG - CUSTOMER SUCCESS - MDOP reached end of extended support on April 14, 2026, meaning no further security updates or bug fixes; Microsoft recommends migrating all remaining MDOP workloads to Intune equivalents. Admins still running MBAM, App-V, or other MDOP components should prioritise migration planning now.

Windows 365 Developer-Focused Enhancements Announced at Build 2026

INFO **ENT** **WIN** BLOG - WINDOWS IT PRO - Microsoft announced a wave of Windows 365 improvements at Build 2026 targeting developer and AI/ML workloads, including streamlined onboarding, flexible compute options, and deeper cloud-PC integration. No firm GA date given; admins managing developer fleets should watch the roadmap for rollout timelines.

macOS ADE: No Supported Method to Enforce Minimum OS Version Before Platform SSO Registration

ADVISORY **ENT** **MAC** **1 REPORT** BLOG - DISCUSSIONS - A community discussion highlights a gap where Intune has no supported mechanism to block Setup Assistant progression if a Mac does not meet a minimum macOS version requirement before Platform SSO registers during ADE. Admins deploying zero-touch macOS with Platform SSO should be aware there is currently no roadmap item confirmed to address this.

Action required

Secure Boot CA 2023 Certificate Update: Widespread Admin Confusion, Manual Trigger Available

ADVISORY **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Multiple admins report that updating BIOS firmware alone does not trigger the Secure Boot CA 2023 certificate update; the scheduled task \Microsoft\Windows\PI\Secure-Boot-Update must be manually triggered or policy must be explicitly assigned to the device. "No Data Observed - Action Required" confidence level is appearing even on devices showing green certificate status, and the June 4 Microsoft AMA session confirmed the process remains opaque even to Microsoft engineers.

What shipped

No stories this week.

From the field

WuFB Driver Update Policies Bypassed: 32 Drivers Installed Across Multiple Tenants Simultaneously

CRITICAL **ENT** **WIN** **MS ACK** REDDIT - R/INTUNE - Admins across at least two tenants reported 32 drivers simultaneously downloading and installing despite declined/blocked WuFB driver policies, with Microsoft posting a Service Health bulletin (MO1332784) approximately six hours after the incident began. The delayed health notification drew sharp criticism from the community; admins should audit driver inventory and review declined driver states in affected tenants.

ASR Rules Silently Disabled When Security Baseline and Endpoint Security Profile Conflict

CRITICAL **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - When a Defender for Endpoint Security Baseline (which sets certain ASR rules to Audit) and a separate Endpoint Security ASR profile (set to Block) are both assigned, the conflicting rules are silently disabled rather than raising a conflict alert in Intune. Admins should audit ASR rule effective state via MDM diagnostic logs or Defender Advanced Hunting, and consider removing ASR rules from Security Baselines in favour of a single dedicated ASR policy.

Newly Created Entra Groups and App Deployments Not Reporting or Applying This Week

ADVISORY **ALL** **CROSS** **CONFIRMED** REDDIT - R/SYSADMIN - Multiple admins independently report that newly created Entra groups are not honouring app deployments and that freshly created app assignments show no reporting data, affecting both Android and iOS this week. Apps may actually be installing silently without reporting, but admins cannot confirm compliance; checking the Company Portal app and device logs directly is the current workaround.

Motherboard Replacement Breaks Entra/Intune Authentication Due to TPM/Hardware Hash Change

ADVISORY **ALL** **WIN** **CONFIRMED** REDDIT - R/SYSADMIN - Replacing a motherboard changes the TPM and hardware hash, causing persistent MFA/auth loops in M365, Outlook, and Teams even when local login still works; Autopilot registration must also be deleted and re-created. Community consensus is to wipe and re-enrol rather than attempt certificate remediation, and to verify the replacement board is not already registered to another tenant.

[Read more](#)

Scripts and Remediations: Inconsistent Execution, No Logs, and 8-Day Gaps Draw Community Fury

ADVISORY **ALL** **WIN** **CONFIRMED** REDDIT - R/SYSADMIN - A high-engagement r/sysadmin thread (900+ upvotes, 460+ comments) documents Scripts and Remediations failing silently, not executing on schedule, producing no logs, and running days late with no explanation. A separate Tech Community discussion highlights a related pain point: configuration policy changes for SharePoint library auto-sync can take up to eight hours to apply with no way to force an immediate push.

Intune App Inventory Graph API Returns 403 Despite GUI Access

ADVISORY **ENT** **CROSS** **1 REPORT** BLOG - DISCUSSIONS - An admin reports that enabling the app inventory configuration profile allows data to be viewed in the Intune portal, but querying `beta/deviceManagement/managedDevices/{id}/deviceInventory('ApplicationProperties')` via Graph returns a 403 Forbidden error. Additional API permissions or consent beyond standard Intune Graph scopes appear to be required; the exact permission set needed is not documented.

Autopilot v2 Device Rename Causes Unexpected OOB Reboot Behaviour

ADVISORY **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins using PowerShell to rename devices during Autopilot v2 (Device Preparation) report that exit code 3010 does not reliably trigger a reboot before the user can log in, breaking the intended rename-before-first-login workflow. The recommended fix is to configure the Win32 app wrapper with a Hard Reboot exit code action for 3010 in Intune, rather than relying on the OS to handle the soft-reboot signal.

Remote Help Rollout: Edge Cases in Mixed Build Environments, SKU Confusion Persists

INFO **ENT** **WIN** **SUITE** **CONFIRMED** REDDIT - R/INTUNE - Admins rolling out Intune Remote Help report generally positive integration with existing Entra/Intune stacks and useful audit logs, but encounter edge cases with mixed hardware configurations during piloting. Community uncertainty remains about whether Remote Help is included in E5 licensing or requires a separate Intune Suite add-on.

Third-Party App Patching Tool Comparison: Robopack vs. Patch My PC vs. WAU

INFO **SMB** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Community discussions across two threads this week compare Robopack (~\$900/yr, 250-device minimum), Patch My PC (~\$3,500/yr, 1,000-device minimum, MSP channel available for lower counts), and open-source Winget-AutoUpdate-Intune for third-party app lifecycle management. Admins in smaller environments are leaning toward Robopack or WAU on cost grounds, while those prioritising support quality and catalogue breadth favour Patch My PC.

[Read more](#)

Intune Naming Schemes: Community Tool nametune.vercel.app Gaining Traction

INFO **ALL** **CROSS** **CONFIRMED** REDDIT - R/INTUNE - In a popular "rookie mistakes" thread, admins flagged the lack of a consistent naming convention as a top early-career error, with one admin sharing the community tool nametune.vercel.app for standardised Intune object naming integrated with Power Automate and SharePoint. Other top lessons: avoid blindly replicating GPOs in Intune, don't over-configure, and treat Security Baselines with caution.

[Read more](#)

Hybrid Joined Devices: Community Advises Against Managing via Both GPO and Intune Simultaneously

ADVISORY **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins debating GPO vs. Intune for hybrid-joined endpoints warn that running both simultaneously leads to unresolved policy conflicts, with some CSPs silently winning over Intune when set to "disabled or not configured." The prevailing community recommendation is to draw a hard line: manage existing hybrid devices via GPO and move net-new Entra-joined devices exclusively to Intune.
