

Intune Weekly

Your weekly briefing on what's next in Microsoft Intune

COVERING JUNE 9 - 15, 2026

Curated by Ugur Koc

Kerberos RC4 deadline looms, KB5094126 breaks HP devices, and Intune Devices blade goes dark.

BROUGHT TO YOU BY

ON THE RADAR

Kerberos RC4 Enforcement: 30-Day Remediation Deadline

July 2026 Windows security updates permanently remove Audit mode - any remaining RC4 dependencies will cause authentication failures the moment the update applies.

MICROSOFT - RELEASE HEALTH

KB5094126 Causing BSODs and Boot Failures on HP Devices

The June 2026 cumulative update is actively breaking HP ProBook/EliteBook fleets with boot failures, BitLocker recovery prompts, and EFI partition issues - admins should pause update rings for HP devices now.

REDDIT

Intune Devices Blade Outage Across Multiple Regions

The Devices blade was confirmed unavailable on 16 June across UK, Austria, Netherlands, and Brazil - admins should monitor Service Health for an incident ID and verify console access is restored.

REDDIT

Microsoft Tunnel v20260129.1 Stuck - Remediation Script Out

Servers on this version are stalling mid-upgrade and need Microsoft's mstunnel-patch-2602 script or a full reinstall to restore tunnel functionality.

BLOG - CUSTOMER SUCCESS

Controlled Configuration for Defender Antivirus (Preview)

This upcoming feature will override Group Policy, ConfigMgr, and local changes to Defender settings - co-managed environments need to review governance implications before it lands.

MICROSOFT - IN DEVELOPMENT

COMMUNITY SPOTLIGHT

Florian Salzmann & Jannik Reinhard

CMTrace.dev - log viewer in your browser

A free, zero-install log viewer for ConfigMgr, SCCM, and Intune. Open massive client logs, color-code severity, and chase down error codes - all in the browser, with files processed 100% locally so nothing leaves your machine.

Landing in your tenant soon

Kerberos RC4 Enforcement Mode Arrives with July 2026 Windows Security Update

CRITICAL **ENT** **WIN** MICROSOFT - RELEASE HEALTH - The July 2026 Windows security update removes Audit mode for Kerberos RC4, leaving Enforcement as the only supported behavior - environments with remaining RC4 dependencies will see authentication failures. Audit your service accounts, applications, and devices now; the 30-day clock is running.

Enrollment Time Grouping for Apple ADE Policies Goes GA

ADVISORY **ENT** **IOS** **MAC** MICROSOFT - IN DEVELOPMENT - Enrollment Time Grouping (ETG) will GA for new iOS/iPadOS and macOS ADE enrollment policies, covering user-affinity, userless, Shared iPad, and Microsoft Entra shared mode flows. Pre-computing group membership at enrollment time means policies and apps land significantly faster on freshly provisioned devices.

Intune Data Warehouse (Beta) Power BI Connector Retirement Begins

ADVISORY **ALL** **CROSS** MICROSOFT - IN DEVELOPMENT - The beta Intune Data Warehouse connector in Power BI is being retired; the transition starts late April 2026 and rolls out gradually over two weeks. Any Power BI reports created before November 2025 must be migrated to the Intune connector v2 or the OData Feed connector before data access is cut off.

Scope Tags Now Respected in EPM Reports

ADVISORY **ENT** **WIN** **SUITE** MICROSOFT - IN DEVELOPMENT - Endpoint Privilege Management reports will be updated to honour the report viewer's assigned scope, displaying only the users and devices within that admin's scope. Admins with delegated/scoped roles should validate their EPM reporting views once the fix lands.

Device Control Policy Support Extends to MDE Security Settings Management

ADVISORY **ENT** **WIN** MICROSOFT - IN DEVELOPMENT - Attack surface reduction Device Control policies will apply to devices managed via Microsoft Defender for Endpoint security settings management, even when those devices are not enrolled in Intune. Admins should review existing Device Control policy assignments before rollout to avoid unintended enforcement on MDE-only managed endpoints.

Maintenance Window for Windows Update for Business Now GA

INFO **ALL** **WIN** REDDIT - R/INTUNE **CONFIRMED** - The MaintenanceWindow CSP setting has moved from Insider Preview to GA, allowing admins to define explicit maintenance windows for Windows Update via Settings Catalog. Currently CSP-only, but the community confirms it is functional for production use.

On the horizon

Android Personally Owned Work Profile Devices Migrate to Android Management API (AMAPI)

ADVISORY **ENT** **AND** MICROSOFT - IN DEVELOPMENT - Intune is moving personally owned Android work profile enrollment to AMAPI, bringing web-based enrollment (no app required) and a modernised policy delivery model. Admins should begin reviewing any configurations or third-party integrations that depend on the legacy EMM API, as some capabilities such as Strict Tunnel Mode will require AMAPI migration.

[Read more](#)

Controlled Configuration for Defender Antivirus Settings (Public Preview)

ADVISORY **ENT** **WIN** MICROSOFT - IN DEVELOPMENT - Controlled Configuration will enter public preview, making Intune and Microsoft 365 Defender the single authoritative source for Defender antivirus settings, overriding Group Policy, ConfigMgr, and local changes. This extends Tamper Protection by locking settings to admin-defined values rather than just defaults - a significant governance shift for co-managed environments.

[Read more](#)

Strict Tunnel Mode for Microsoft Tunnel on Android Enterprise

ADVISORY **ENT** **AND** MICROSOFT - IN DEVELOPMENT - Strict Tunnel Mode will block all network traffic if the VPN connection drops, with an admin-configurable app exclusion list for traffic that must bypass the tunnel. Only available for devices enrolled via AMAPI; legacy EMM API work profile devices must migrate first.

[Read more](#)

Multiple Managed Accounts for App Protection Policies (iOS and Android)

ADVISORY **ENT** **IOS** **AND** MICROSOFT - IN DEVELOPMENT - The Multiple Managed Accounts (MMA) feature will allow users to sign into more than one managed account within a single MAM-protected app, with app protection policies enforced independently per account. Especially relevant for consultants, merger/acquisition scenarios, and multi-mailbox users.

[Read more](#)

Client-Driven Compliance Evaluation for Windows Devices (Preview)

ADVISORY **ENT** **WIN** MICROSOFT - IN DEVELOPMENT - Windows devices will proactively request compliance re-evaluation when they detect a significant local state change, eliminating the wait for the next scheduled check-in. Admins managing conditional access scenarios should see materially faster access decisions and remediation feedback once this rolls out in preview.

[Read more](#)

In-Place Renewal for Cloud PKI Issuing Certification Authorities

ADVISORY **ENT** **CROSS** MICROSOFT - IN DEVELOPMENT - Intune will support in-place renewal of Cloud PKI issuing CAs nearing expiration, removing the need to create replacement CAs and update all dependent SCEP profiles manually. This reduces operational risk for certificate-dependent scenarios including Wi-Fi, VPN, and email.

[Read more](#)

Agentic Identity for the Policy Configuration Agent (Public Preview)

ADVISORY **ENT** **WIN** MICROSOFT - IN DEVELOPMENT - The Intune Policy Configuration Agent will shift from using a human user identity to a Microsoft Entra agentic identity, enabling it to run policy actions securely and independently. Existing agent deployments will require an admin to manually trigger the transition from the agent's Settings tab.

Custom Compliance Settings Coming to macOS

ADVISORY **ALL** **MAC** MICROSOFT - IN DEVELOPMENT - Intune will gain custom compliance support for macOS using scripts and JSON rules, mirroring the existing capability on Windows and Linux. Results will surface in the standard Intune compliance dashboard alongside built-in settings.

[Read more](#)

Grant Enhanced MTD Security Permissions on Android Enterprise

ADVISORY **ENT** **AND** MICROSOFT - IN DEVELOPMENT - A new Google-introduced capability will let admins grant elevated Mobile Threat Defense permissions to one MTD app (such as Microsoft Defender for Endpoint) via the Intune MTD connector, exempting it from app suspension, hibernation, and user-initiated restrictions. Supported on corporate-owned COPE, fully managed, and dedicated Android Enterprise devices.

[Read more](#)

Silence Apps on Managed Home Screen During Authentication Prompts (Android)

ADVISORY **ENT** **AND** MICROSOFT - IN DEVELOPMENT - An opt-in setting for Managed Home Screen will silence all non-allowlisted apps when MHS prompts for authentication, preventing apps from bypassing the session PIN by starting activities or displaying notifications. Admins can configure an allowlist to keep critical apps such as phone calls active during the locked state.

[Read more](#)

Block Bluetooth Sharing Setting Added to Android Enterprise Settings Catalog

INFO **ENT** **AND** MICROSOFT - IN DEVELOPMENT - A new "Block Bluetooth Sharing" setting will appear in the Settings Catalog for Android Enterprise, allowing admins to prevent devices from sharing content over Bluetooth. Behaviour varies by enrollment type: fully managed and dedicated devices honour the setting bidirectionally, while COPE work profile devices block sharing regardless.

[Read more](#)

Disable MAC Address Randomization on macOS Wi-Fi Profiles

INFO **ENT** **MAC** MICROSOFT - IN DEVELOPMENT - A new setting in macOS Wi-Fi configuration profiles will allow admins to disable MAC address randomization, restoring static MAC behaviour needed for network access control systems. Enabling randomisation remains the recommended privacy default; this setting is specifically for NAC-dependent environments.

[Read more](#)

802.1x Wired Networks Profile Coming to iOS/iPadOS

INFO **ENT** **IOS** MICROSOFT - IN DEVELOPMENT - A new Wired Networks device configuration profile for iOS/iPadOS will support 802.1x Ethernet access control with EAP protocols (TLS, PEAP, TTLS), enabling M-series iPads to securely connect to hot-desk docks and enterprise wired networks. Mirrors the existing macOS wired network profile experience.

STIG Audit Security Baseline for GCC High Tenants

INFO **ENT** **WIN** MICROSOFT - IN DEVELOPMENT - A new security baseline focused on Security Technical Implementation Guide (STIG) auditing will be available for GCC High tenants, generating compliance reports against STIG-recommended configurations without enforcing changes. Audit-only scope makes this safe to deploy alongside existing baselines.

Action required

Microsoft Tunnel Servers on Version 20260129.1 Are Stuck - Remediation Script Available

CRITICAL **ENT** **CROSS** **ACTION REQUIRED** BLOG - CUSTOMER SUCCESS - An upgrade bug in Microsoft Tunnel version 20260129.1 causes servers to stall and fail to complete the upgrade process. Microsoft has published a remediation script (mstunnel-patch-2602) and recommends either running the script or performing a full uninstall/reinstall to version 20260330.1 or later.

Kerberos RC4 Enforcement Deadline: Remediate RC4 Dependencies Before July 2026 Update

CRITICAL **ENT** **WIN** **ACTION REQUIRED** MICROSOFT - RELEASE HEALTH - July 2026 Windows security updates will permanently remove Audit mode for Kerberos RC4 - any remaining RC4-dependent service accounts, apps, or devices will experience authentication failures after the update is applied. Admins have approximately 30 days to audit and remediate RC4 usage or apply explicit configuration before the update begins rolling out.

Intune Devices Blade Outage Reported Across Multiple Regions

CRITICAL **ALL** **CROSS** **ACTION REQUIRED** REDDIT - R/INTUNE **CONFIRMED** - Admins in the UK, Austria, Netherlands, and Brazil reported the Intune Devices blade as unavailable on 16 June, with Microsoft staff acknowledging the report in-thread and investigating. Monitor the Microsoft Service Health dashboard for an official incident ID and resolution status.

What shipped

June 2026 Windows Security Update (KB5094126) Now Available

ADVISORY **ALL** **WIN** MICROSOFT - RELEASE HEALTH - The June 2026 cumulative security update released 9 June for all supported Windows versions, including Windows 11 25H2, and includes improvements from the May 2026 out-of-band update KB5089573. Admins should prioritise deployment via Intune Update Rings while monitoring the known issues list for HP device-specific boot and OneDrive sync problems flagged by the community.

[Read more](#)

Enterprise App Management: Security Architecture Deep-Dive Published

INFO **ENT** **WIN** BLOG - CUSTOMER SUCCESS - Microsoft published a detailed explainer covering how Enterprise App Management secures the Win32 app catalog from ingestion through to device delivery, addressing common customer concerns about app provenance and integrity. Useful reading for security-focused admins evaluating the EAM add-on.

From the field

KB5094126 Causing Boot Failures, BSODs, BitLocker Recovery, and HP EFI Partition Issues

CRITICAL **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - The June 2026 cumulative update is triggering boot failures, BSODs, BitLocker recovery prompts, HP OneDrive sync breaks, and enterprise app failures on some HP ProBook/EliteBook devices - community workaround is to delete HP .bin files from small (100 MB) EFI partitions. Admins with HP fleets should consider pausing update rings until HP-specific issues are resolved.

[Read more](#)

CanReset Value Randomly Flipping on Passwordless Cloud-Only Windows 11 Devices

ADVISORY **ENT** **WIN** **1 REPORT** BLOG - DISCUSSIONS - Admins report that `dsregcmd /status` shows the CanReset value under User State intermittently flipping between "No" and "DestructiveAndNonDestructive" on cloud-only passwordless devices, randomly blocking users from configuring Windows Hello facial recognition or PINs. No confirmed fix or Microsoft acknowledgement yet; the behaviour appears tied to passwordless policy enforcement timing.

[Read more](#)

HP EFI Partition (100 MB) Causing Recurring Windows Update Failures

ADVISORY **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - HP devices shipped with a 100 MB EFI partition are repeatedly failing Windows updates due to insufficient partition space; resizing is not practical without reimaging. Community-recommended workaround is a Proactive Remediation script that clears stale BIOS firmware files from the partition when free space drops critically low.

Secure Boot CA 2023 Rollout: Confidence Level Confusion and What "Under Observation" Actually Means

ADVISORY **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Many admins reporting that 94%+ of devices show as current in the Secure Boot report but appear as "Under Observation – More Data Needed" rather than "High Confidence," causing uncertainty about whether further action is needed. Community clarification: "Under Observation" reflects Microsoft's data confidence in safe rollout, not a compliance failure - and an alternative PowerShell-based approach is circulating for environments with false positives.

[Read more](#)

Secure Boot CA 2023 Expiry Behaviour for Offline and Non-SB Devices Clarified by Community

ADVISORY **ENT** **WIN** **CONFIRMED** REDDIT - R/SYSADMIN - Admins managing devices with Secure Boot disabled or chronically offline are concerned about boot failures if certificate updates are not applied before the expiry date. Community consensus backed by Microsoft FAQ: an expired (but not revoked) certificate will not cause boot failures immediately, though non-compliance will be flagged - the critical change happens only upon revocation, not expiry.

Browser-Based CMTrace Log Viewer (cmtrace.dev) Built for Autopilot ESP Troubleshooting

INFO **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - A community team released cmtrace.dev, a full-featured CMTrace log viewer that runs entirely in-browser with no install, account, or file upload required - built specifically for the scenario where ESP is stuck and CMTrace is not yet available on the device. Features include severity colour coding, find/filter/highlight, built-in Win32/HRESULT error code lookup, log comparison, and multi-tab support.

Edge Extension Inventory Script Sending Data to Azure Log Analytics

INFO **ALL** **WIN** **1 REPORT** REDDIT - R/INTUNE - A community PowerShell script designed to run as an Intune Remediation collects Edge extension details (name, version, ID, profile) from all managed devices and ships them to an Azure Log Analytics custom table. A follow-up commenter shared a variant covering both Edge and Chrome that writes to SharePoint instead, avoiding Log Analytics costs.

Windows App (Remote Desktop) Update Notification Requiring User Interaction - No Silent Update Option Found

ADVISORY **ENT** **WIN** **1 REPORT** BLOG - DISCUSSIONS - Admins deploying the Windows App are finding that update notifications display an in-app banner requiring users to click to trigger the update, with no documented Group Policy or Intune setting to enforce fully silent, hands-off updates. No confirmed workaround or Microsoft response in the thread yet.

WDAC and Adobe Acrobat Update Compatibility Causing Consistent Failures

ADVISORY **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins rolling out WDAC in restrictive mode report that while an initial Acrobat version installs, subsequent updates fail consistently due to signing rule gaps during the update process. Community suggestions include creating publisher-level signature rules for Adobe, using the Adobe Admin Portal to build self-updating packages, or switching to the Microsoft Store version of Acrobat to sidestep the issue.

SCCM-to-Intune Migration: Real-World Gotchas from Admins Making the Switch

INFO **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - A thread from admins newly piloting Intune from SCCM surfaces several underdocumented issues: some native UWP apps still deploy as Win32 in Intune, Company Portal fails to install on some already-enrolled devices, policy enforcement is significantly slower with less granular per-device forcing, and web shortcut deployment options are limited. Community advice: lean on All Devices assignments with Filters rather than groups for speed, and evaluate Patch My PC or Robopack for Win32 app lifecycle management.
