

Intune Weekly

Your weekly briefing on what's next in Microsoft Intune

COVERING JUNE 16 - 22, 2026

Curated by Ugur Koc

Intune Suite rolls into E3/E5, IME breaks WDAC, and Win32 app delivery goes HTTPS-only.

BROUGHT TO YOU BY

ON THE RADAR

IME Update Blocked by WDAC - Autopilot Enrollment Failures

A new runtime DLL in IME versions 1.99.101.0–1.101.103.0 is not covered by existing WDAC policies, actively breaking Autopilot provisioning across affected tenants with no official fix yet.

REDDIT

Win32 App Delivery HTTPS-Only - MCC Nodes Must Be Updated

As of June 16, unupdated Microsoft Connected Cache nodes silently fall back to direct internet download for all Win32 apps, negating bandwidth savings until nodes are patched.

MICROSOFT - LEARN

Advanced Intune Suite Features Rolling into M365 E3/E5 July 1

EPM, Remote Help, Cloud PKI, and EAM begin lighting up for eligible EMS E3/ME3/ME5 tenants now, but rollout is uneven - admins should validate which features are live and which are still blocked before July 1.

MICROSOFT - MESSAGE CENTER

M365 Apps Policy Config Removed from Intune Admin Center in June 2606

The June 2606 service release removes the M365 Apps policy page from the Intune admin center entirely, redirecting to the Apps admin center - admins must migrate workflows and bookmarks before the release lands.

MICROSOFT - MESSAGE CENTER

CapabilityAccessManager.db-wal Ballooning to 70 GB on Windows Devices

A never-closed SQLite read transaction is causing this WAL file to grow until C: drives fill completely; safe-mode deletion is the only current remediation and no Microsoft fix is confirmed.

REDDIT

COMMUNITY SPOTLIGHT

Nick Benton @ennnbeee

IntuneOSCompliance

A PowerShell tool that automatically updates operating-system-based compliance policies and app protection policies to track the latest supported Windows, Android, and Apple OS releases. Optionally posts a rich Microsoft Teams card to an Incoming Webhook with the results of each run, so admins stay current without hand-editing minimum OS versions.

Week of 23 June 2026

Landing in your tenant soon

Advanced Intune Suite Features Roll into Microsoft 365 E3/E5 Starting July 1

ADVISORY **ALL** **CROSS** **SUITE** MICROSOFT - MESSAGE CENTER - Capabilities including EPM, Remote Help, Cloud PKI, and more become effective July 1 for new customers, with existing eligible tenants expected to receive them by August 1, 2026 - no minimum seat count required, eligibility ties to EMS E3/ME3/ME5. Admins should validate which features have lit up in their tenants now, as rollout has already started unevenly.

M365 Apps Policy Configuration Moving Out of Intune Admin Center

ADVISORY **ALL** **WIN** **ACTION REQUIRED** MICROSOFT - MESSAGE CENTER - With the June 2606 service release, the ability to configure Microsoft 365 Apps policy settings inside the Intune admin center (Apps > Policies for Microsoft 365 apps) will be removed; the page will redirect to the Microsoft 365 Apps admin center instead. Admins should migrate any workflows or bookmarks to the Apps admin center before the June release lands.

Windows 11 26H2 Approaching - Begin Staged Rollout Planning Now

ADVISORY **ALL** **WIN** BLOG - WINDOWS IT PRO - Windows 11 version 26H2 is available to Insiders now and is coming soon to broad release; for devices already on 25H2 the update will be delivered as a small enablement package rather than a full OS replacement. Admins should review compatibility, update rings, and any feature update deferrals before general availability.

Updated Security Baseline for Microsoft 365 Apps for Enterprise (v2512) Coming

ADVISORY **ALL** **WIN** MICROSOFT - IN DEVELOPMENT - A new Intune security baseline version v2512 for Microsoft 365 Apps for Enterprise is incoming, skipping the previously published v2412 and aligning with the latest Microsoft security guidance. Admins should review the new baseline carefully before adopting it; three VBA-related sub-settings are deferred to a future update.

On the horizon

Auto-Update for Enterprise App Management Applications

INFO **ALL** **WIN** MICROSOFT - IN DEVELOPMENT - Intune will automatically detect newer versions of EAM catalog apps and push updates to targeted devices with required assignments, eliminating manual packaging and supersedence workflows. No confirmed release date yet.

Mark Windows Devices Noncompliant When Prohibited AI Agents Are Detected

ADVISORY **ENT** **WIN** MICROSOFT - IN DEVELOPMENT - Admins will be able to define a list of prohibited local AI agents (such as OpenClaw) in compliance policy; devices with detected agents will be flagged noncompliant and blocked via Conditional Access until the agent is removed. No release date yet.

Enforce Routes Support for iOS/iPadOS and macOS VPN Profiles

INFO **ALL** **IOS** **MAC** MICROSOFT - IN DEVELOPMENT - Intune will implement Apple's Enforce Routes capability in VPN profiles to prevent traffic de-cloaking scenarios, deriving the correct routing behavior automatically from Include/Exclude network settings. No firm date.

[Read more](#)

WPA3-Personal Support Coming to iOS/iPadOS Wi-Fi Profiles

INFO **ALL** **IOS** MICROSOFT - IN DEVELOPMENT - Admins will be able to select WPA3-Personal as a security type in iOS/iPadOS Wi-Fi configuration profiles; WPA3 support for Windows, Android, macOS, and WPA3-Enterprise is planned for a later, unscheduled release.

Action required

Intune Win32 App Delivery Now HTTPS-Only - Update Microsoft Connected Cache Nodes

CRITICAL **ALL** **WIN** **ACTION REQUIRED** **MICROSOFT - LEARN** - As of June 16, 2026, Intune switched Win32 app delivery from HTTP to HTTPS; MCC nodes not yet updated to support HTTPS will no longer cache this content, causing devices to fall back to direct internet download and negating bandwidth savings. Admins using MCC must update their cache nodes immediately to restore caching, and will also gain Teams update caching as a bonus.

Secure Boot Certificate Updates Required for Linux on Azure VMs

CRITICAL **ENT** **CROSS** **ACTION REQUIRED** **MICROSOFT - RELEASE HEALTH** - New guidance is available for managing Secure Boot certificate updates on Linux Azure VMs (including Trusted Launch and Confidential VMs); organizations that do not act risk disruption to secure boot processes and loss of access to platform updates. Admins should review the guidance and begin certificate update planning now.

Large Wave of In-Development Features Shipped or Removed from Pipeline

INFO **ALL** **CROSS** **MICROSOFT - IN DEVELOPMENT** - More than twenty features previously listed as in development have been removed from the In Development page this week, including Strict Tunnel Mode for Microsoft Tunnel on Android, Wired Networks profile for iOS/iPadOS, AMAPI migration for Android personally owned work profile devices, Enrollment Time Grouping for Apple ADE GA, In-place renewal of Cloud PKI CAs, the updated Device page in admin center (public preview), and many others. Admins should check the What's New page and June release notes to confirm which have shipped versus been cancelled.

From the field

IME Update Blocked by WDAC During Autopilot – Enrollment Failures Reported

CRITICAL **ENT** **WIN** **CONFIRMED** **REDDIT** - R/INTUNE - Multiple admins report that a recent Intune Management Extension update (between 1.99.101.0 and 1.101.103.0) introduced a new runtime DLL not covered by existing WDAC policies, causing Autopilot provisioning and enrollment failures. The workaround is to add an explicit WDAC allow rule for the new IME component; no official Microsoft fix or acknowledgement confirmed yet.

Graph API 500 Error on BIOS Password Hardware Details Endpoint

CRITICAL **ENT** **WIN** **CONFIRMED** **REDDIT** - R/INTUNE - Admins using the beta Graph endpoint `deviceManagement/hardwarePasswordDetails` to retrieve Dell BIOS passwords are receiving Error 500 responses for approximately two weeks, potentially leaving wiped devices with inaccessible BIOS passwords. No workaround or Microsoft acknowledgement has been shared yet; admins relying on this endpoint for device recovery should investigate urgently.

Company Portal "Error Loading Apps" Outage Hits EU Region

CRITICAL **ALL** **CROSS** **CONFIRMED** **REDDIT** - R/INTUNE - Multiple EU-region admins reported Company Portal failing with "Could not load apps due to a network issue" errors, with an Intune Support Team member acknowledging the issue in the thread and confirming investigation. Admins in affected regions should monitor Service Health for resolution status.

Windows Quality Update Report Showing False "Not Up to Date" for Deferred Devices

ADVISORY **ALL** **WIN** **CONFIRMED** **REDDIT** - R/INTUNE - Multiple admins report the June quality update report is showing up to 80% of devices as "Not Up to Date" despite manual spot-checks confirming patches are applied; the issue appears linked to deferral policies being misinterpreted by the updated report UI. The report UI also changed column names, breaking Power BI extracts that relied on them.

E3/E5 Intune Suite Feature Rollout Uneven – Some Features Still Blocked

ADVISORY **ALL** **CROSS** **SUITE** **CONFIRMED** REDDIT - R/INTUNE - Admins with eligible E3/E5 licenses report EPM and Cloud PKI are accessible but Remote Help tenant admin options and Enterprise App Management are still showing as blocked or requiring admin access grants. Full feature availability appears to be rolling out gradually over days to weeks rather than all at once on July 1.

[Read more](#)

Eligibility Confusion Around E3/E5 Intune Suite Inclusion – No Seat Minimum, EMS SKU Is the Key

ADVISORY **MSP** **CROSS** **SUITE** **CONFIRMED** REDDIT - R/INTUNE - Community research and direct product team conversations clarify that eligibility for the new Intune Suite inclusions is tied to EMS E3/ME3/ME5 licensing with no minimum seat count - not Microsoft 365 bundle membership alone - and the changes do not currently apply to A-series (education) licensing.

[Read more](#)

CapabilityAccessManager.db-wal Ballooning to 10–70 GB on Managed Windows Devices

ADVISORY **ALL** **WIN** **CONFIRMED** REDDIT - R/SYSADMIN - Admins running Intune remediation detection scripts report that a significant portion of their fleet has CapabilityAccessManager.db-wal files exceeding 1 GB, with some reaching 70 GB and causing full C: drives. The underlying cause is a never-closed SQLite read transaction; the immediate remediation requires safe-mode deletion of the WAL file, and a proper fix has not been confirmed by Microsoft.

[Read more](#)

Autopilot Enrollment Security Gap: Devices Can Bypass OOB and Avoid MDM Enrollment

ADVISORY **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins confirm a known gap where users who skip network setup during OOB can create a local account and avoid Autopilot enrollment entirely; the recommended mitigations are Conditional Access blocking unmanaged device access and configuring an Autopilot deployment profile that suppresses the "limited setup" option.

[Read more](#)

Autopatch Quality Update Report Marks Deferred Devices as Non-Compliant

ADVISORY **ENT** **WIN** **1 REPORT** BLOG - DISCUSSIONS - An admin reports that devices with a 30-day Autopatch deferral are marked "Not Up to Date" in the Quality Update Status report even when fully current for their deferral window, suggesting the report does not correctly account for deferral policies when calculating compliance status.

[Read more](#)

Intune Reporting Lag and Compliance Gaps: How Admins Are Coping

ADVISORY **ALL** **CROSS** **CONFIRMED** REDDIT - R/INTUNE - A widely-resonant thread surfaces widespread frustration with Intune's compliance reporting lag, "Not Evaluated" devices, and silent remediation failures; the most practical community workaround is supplementing with scheduled Graph API queries and Power BI dashboards rather than trusting the portal directly.

[Read more](#)

Community Tool Roundup: Third-Party App Patching Alternatives to PMPC

INFO **MSP** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Active community threads identify Patch My PC, Robopack, Action1, PDQ, TridentStack Control (free under 200 endpoints), and RFF as the leading alternatives for third-party app lifecycle management where EAM coverage is insufficient; EAM's "auto-update" is clarified as Microsoft managing the packaging pipeline, not automatic push-to-device deployment.

[Read more](#)

Deploying Claude Desktop App via Intune – Community-Sourced Methods

INFO **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins share working approaches for deploying the Claude desktop MSIX via Intune: wrapping it in a Win32 app alongside a PowerShell script that enables VirtualPlatform and uses Add-AppxProvisionedPackage, noting the MSIX is already globally signed so a separate cert profile may not be required.

[Read more](#)

Deploying HEIC/HEVC Extensions on Windows via Intune

INFO **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins report that HEIF Image Extensions and HEVC Video Extensions for Windows are not freely redistributable via Store; volume licensing customers can download them from the admin portal for Intune/SCCM deployment, and one workaround using an archive.org-hosted package is circulating for non-VL environments.

[Read more](#)

Secure Boot Cert Rollout: Handling Pre-Staged Laptops in Storage

INFO **ALL** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins share strategies for devices in storage that may miss the Secure Boot certificate push: staging updates before shipment where possible, documenting serial numbers of unstaged devices, and relying on Intune's compliance report to identify unpatched machines post-enrollment.
