

Intune Weekly

Your weekly briefing on what's next in Microsoft Intune

COVERING APRIL 28 - MAY 4, 2026

 Curated by Ugur Koc

Hotpatch on by default, Secure Boot deadline looms, and Autopilot stalls hit production.

BROUGHT TO YOU BY

ON THE RADAR

Secure Boot Certs Expire June 2026 - Remediate Now

Unremediated devices will silently stop receiving boot manager updates and may trigger BitLocker recovery prompts - the June deadline leaves little runway for large inventories.

REDDIT

Hotpatch Flipped On Tenant-Wide - May Is First Affected Month

Microsoft silently enabled Hotpatch for all tenants in April, meaning newly enrolled devices will receive hotpatch instead of a full CU starting in May - admins must configure exclusion groups now for any devices that should not receive hotpatches.

MICROSOFT - MESSAGE CENTER

Autopilot Pre-Provisioning Stalling at App Install Phase

Multiple admins are hitting this in production today with no config changes on their end, and the only unblock requires a force-reboot - active issue to watch before scheduling any provisioning runs this week.

REDDIT

Conditional Access Filter Now Hitting Windows Server RDP Sessions

A backend CA evaluation change is causing policies that should exclude company-owned devices to incorrectly apply to Windows Server 2025 RDP sessions, forcing unexpected 8-hour reauthentication - admins with device-filter CA policies should audit scope immediately.

BLOG - DISCUSSIONS

April 2026 Non-Security Preview: Dynamic App Removal + Secure Boot Side-Effect

This update delivers the new dynamic MSIX/APPX removal capability but also carries the KB5082052 Secure Boot cert prompt side-effect - admins should read the known issue before pushing to pilot rings.

MICROSOFT - RELEASE HEALTH

UPCOMING CHANGES

May 11	MC1249428 Retirement of the Semi-Annual Enterprise Channel installation option for unmanaged devices	MESSAGE CENTER
	BREAKING CHANGE	
Jun 2026	RM399933 Intune Suite - Improved elevation detection	IN DEVELOPMENT ROADMAP
Jun 01	MC1255405 Microsoft Edge for Business: Cross-tenant support using Intune Mobile Application Management (MAM)	MESSAGE CENTER
	BREAKING CHANGE	
Jun 06	MC1248388 Plan for Change: Windows Autopatch is enabling hotpatch updates by default	MESSAGE CENTER
Jul 2026	RM499154 Intune Suite - Unattended Remote Help for Windows - Remote Sign-in	IN DEVELOPMENT ROADMAP
Jul 2026	RM536578 [Entra] Microsoft Entra: Microsoft Security Copilot App Lifecycle Management Agent in Microsoft Entra	ROADMAP
	IN DEVELOPMENT	

Landing in your tenant soon

Hotpatch Enabled Tenant-Wide by Default - May Updates Are First Affected

ADVISORY **ALL** **WIN** **MS ACK** MICROSOFT - MESSAGE CENTER - Microsoft silently flipped the tenant-wide Hotpatch toggle to enabled for all tenants in April; May 2026 is the first month newly enrolled devices will receive a hotpatch update instead of a full cumulative update. Admins who need to exclude specific devices (e.g. those mid-Secure Boot certificate remediation) should review exclusion groups now under Tenant administration > Windows Autopatch > Tenant management.

April 2026 Windows Non-Security Preview Update Now Available

ADVISORY **ENT** **WIN** MICROSOFT - RELEASE HEALTH - The April 2026 non-security preview update is available for Windows 11 versions 26H1, 25H2, and 24H2; it includes the new dynamic app removal capability via Group Policy and custom OMA-URI. Admins piloting this update should note the Secure Boot cert prompt side-effect documented in KB5082052 before broad deployment.

On the horizon

Dynamic App Removal for Managed Windows 11 Devices

INFO **ENT** **WIN** BLOG - WINDOWS IT PRO - Admins can now use policy to remove any preinstalled MSIX/APPX app by Package Family Name on Windows 11 24H2 and 25H2 Enterprise and Education devices; full Intune-native support (beyond Group Policy/OMA-URI) is confirmed as coming later. Available now via the April 2026 non-security preview update for early adopters.

Windows 365 for Agents Now in Public Preview

INFO **ENT** **WIN** **PREVIEW** BLOG - WINDOWS IT PRO - Microsoft has launched a public preview of Windows 365 for Agents, providing isolated, governed Cloud PC environments for running AI agents against legacy line-of-business apps that lack APIs. IT teams managing enterprise AI adoption should evaluate governance and Intune policy applicability for these agent-hosted Cloud PCs.

User-Initiated Provisioning for Windows 365 Reserve Now in Public Preview

INFO **ENT** **WIN** **PREVIEW** BLOG - WINDOWS IT PRO - IT admins can now enable a setting allowing end users to self-provision a Windows 365 Reserve Cloud PC when their primary device becomes unavailable, reducing IT intervention during outages. This extends the December 2025 Windows 365 Reserve business continuity capability.

Action required

Secure Boot Certificates Expire June 2026 - Intune-Managed Device Remediation Underway

CRITICAL **ALL** **WIN** **MS ACK** **ACTION REQUIRED** REDDIT - R/INTUNE - The 2011 Secure Boot certificates expire in June 2026; devices that have not received the 2023 replacement certs will stop receiving boot manager updates and may trigger BitLocker recovery key prompts (KB5082052 side-effect). Admins should inventory affected devices now using Microsoft's script, identify those needing a BIOS upgrade before cert update, and complete remediation before the June deadline - compliance policies will still show compliant through the transition but boot manager updates will silently stop flowing to unremediated devices.

What shipped

April 2026 Intune Service Update - Higher-Frequency App Inventory, Linux SSO, Apple Enrollment Expansion

INFO **ALL** **CROSS** **BLOG - INTUNE** - The April 2026 Intune service release delivers three headline improvements: faster Windows app inventory data refresh, Linux single sign-on (SSO) support, and expanded enrollment and control options for Apple devices. Admins can confirm the new service build in Tenant Status and review the full change list in the What's New page.

New Windows Autopatch Overview Report Now Available for All Tenants

INFO **ENT** **WIN** **ROLLING OUT** **BLOG - WINDOWS IT PRO** - The new Windows Autopatch overview report is now live for all tenants, surfacing patch compliance status and risk exposure based on configured policies. Microsoft recommends admins review and reassess their update policies in light of the new compliance visibility this report provides.

Multiple Features Drop Off In-Development List - Likely Shipped in April Service Update

INFO **ALL** **CROSS** **MICROSOFT - IN DEVELOPMENT** - Ten features including Change Review Agent suggestions in Multi Admin Approval (public preview), Enhanced app inventory, Access management for Apple services, Expanded EPM support-approved elevation, Android Enterprise credential manager permissions, Direct Android LOB app management, userless ADE for visionOS/tvOS, and the updated Device page (public preview) have all been removed from the In Development list, indicating they shipped with or around the April 2026 service update.

Microsoft Confirms Intune Policy Sync Is Far Faster Than the "8-Hour" Myth

INFO **ALL** **CROSS** **BLOG - CUSTOMER SUCCESS** - Microsoft has published a formal article clarifying that 90% of policy updates, app deployments, and device actions complete within one hour; the persistent 8-hour sync belief stems from the maximum check-in interval, not typical behavior. Admins troubleshooting apparent policy delays should review the new guidance before assuming a sync issue.

Frontline Device Migration Guidance: Stakeholder Alignment Before Testing

INFO **ENT** **CROSS** **BLOG - CUSTOMER SUCCESS** - Microsoft and MVP Sucheta Gawade have published part two of the frontline mobile device migration series, focusing on aligning business stakeholders before real-world testing begins - particularly relevant for regulated industries like healthcare. Admins planning frontline migrations should use this as a pre-testing checklist framework.

From the field

Conditional Access Filter Behavior Changing - Server Devices Now Getting Sign-In Policies They Shouldn't

ADVISORY **ENT** **WIN** **CONFIRMED** **BLOG - DISCUSSIONS** - An admin reports that as of last week, a Conditional Access policy with a device filter excluding hybrid-joined and company-owned devices began applying to Windows Server 2025 Remote Desktop sessions, forcing 8-hour reauthentication. Extending the filter to also exclude AzureAD-joined devices resolved it, suggesting a backend change in how CA evaluates device trust type filters.

Autopilot Pre-Provisioning Intermittently Stalling at App Install Phase

ADVISORY **ENT** **WIN** **CONFIRMED** **REDDIT - R/INTUNE** - Multiple admins report that Autopilot pre-provisioning is consistently stalling during Device Setup > Apps today with no recent config changes; force-rebooting unblocks progress but is not a viable production workaround. Community suspects Microsoft 365 Apps CDN delays as the likely culprit - avoid mixing app types and M365 Apps in pre-provisioning as a mitigation.

App Enforced Restrictions Not Enforcing on Chrome for BYOD macOS

ADVISORY **ENT** **MAC** **1 REPORT** **BLOG - DISCUSSIONS** - An admin reports that App Enforced Restrictions are correctly blocking unmanaged macOS BYOD sessions in Edge and Safari but failing entirely in Chrome. No confirmed fix yet; the recommended workaround is pushing browser policy to force users to Edge via Intune App Configuration.

Autopilot Profile Assignment Breaks When Moving from "All Devices" to Dynamic Group

ADVISORY **ENT** **WIN** **CONFIRMED** **REDDIT - R/INTUNE** - Admins moving Autopilot profile assignment from "All devices" to a dynamic group find that devices without a GroupTag show as "Assigned externally" and fail to receive a profile, even when they are members of the target group - and sync does not resolve it. Community workaround: bulk-update GroupTags to a temporary value, wait 20-30 minutes, then re-apply the correct tag to force reassignment.

Hybrid Join Producing Double Entra Entries After Device Reset

ADVISORY **ENT** **WIN** **CONFIRMED** **REDDIT - R/INTUNE** - Admins in hybrid environments report that resetting a laptop results in two Entra device objects - one Entra Registered (auto-enrolled to Intune) and one Hybrid Azure AD Joined in pending state (not in Intune). Running `dsregcmd /leave` on the stuck device before the next Entra Connect sync cycle is the community-validated fix to clear the pending object.

WinGet App Deployment via Intune Consistently Failing for Many Admins

ADVISORY **ALL** **WIN** **CONFIRMED** **REDDIT - R/INTUNE** - Multiple admins report that all common WinGet-via-Intune deployment methods fail due to the SYSTEM context limitation; a recurring underlying issue is that the App Installer package fails to self-update on Windows 11 machines, causing silent failures. Community recommends WinGet-AutoUpdate or WinGetAUaaS (a Store-based wrapper with GPO/MDM control) as more reliable alternatives.

Community Tool: PIM Multi-Role Activation GUI for Intune Admins

INFO **ALL** **CROSS** **1 REPORT** REDDIT - R/INTUNE - An admin has published a PowerShell GUI tool at zerotruststories.com/pimtool that lets admins activate multiple Entra and Azure PIM roles simultaneously, including cross-tenant assignments; group role assignment support is in development. Useful for Intune admins juggling multiple PIM-gated roles during incident response.

Community Tool: Central Intune Reporting Dashboard in Development - Feature Requests Wanted

INFO **ALL** **WIN** **1 REPORT** REDDIT - R/INTUNE - An admin is building a Graph API-powered Intune dashboard that surfaces device Object IDs, group assignments, and exportable data not easily visible in the admin center; CVE tracking is a planned feature. The developer is actively soliciting feature requests from the community before release.

Organisations Eyeing Mac Fleets as HP Laptop Prices Double - Intune Mac Management Considerations

INFO **ENT** **MAC** **CONFIRMED** REDDIT - R/SYSADMIN - A widely-discussed thread reports HP EliteBook 860 pricing has jumped from \$1,100 to \$2,200 per unit, pushing some Microsoft-centric shops to evaluate MacBook deployments for the first time. Intune admins in this position should note Intune's native macOS MDM capabilities before defaulting to Jamf, though community consensus is that Jamf remains the more mature option for large Mac fleets.

Domain-to-Entra Migration Without Reformat - Community Shares Scalable Approaches

INFO **ENT** **WIN** **CONFIRMED** REDDIT - R/INTUNE - Admins migrating 200+ devices from hybrid domain join to full Entra join without reformatting are finding success with ForensiT Profile Wizard combined with a Provisioning Package, or a scripted AD disconnect followed by Autopilot re-enrollment. Steve Weiner's YouTube walkthrough is frequently cited as the most practical end-to-end guide for this scenario.
